School name / grade / counselor: _____

Activity record for the school to review before it approves documents connected to SAT registration or score reporting. This is not a College Board form, an admission ticket, or a photo ID. It is the list of work the school can check. Each item states what was actually done and the limit on that claim.

BUILT COMPUTER

Discrete-logic CPU — built 8-bit breadboard computer

I built the processor on six solderless breadboards from 74HC logic chips (registers, adder, decoders, and a 555 clock). It is a real wired computer, not a diagram and not a program pretending to be a CPU.

An ESP8266 NodeMCU only loads the program into the SRAM from a USB port. It is not the processor. Its ground is shared with the CPU. Its 5 V pin is not connected to the CPU supply.

Instructions that are wired: load a number, add, subtract, AND, OR, XOR, copy the result to output LEDs, halt, and no-operation. The machine can free-run or single-step.

The check program is four bytes: load 5, add 7, show the result, halt. The output LEDs should read 0000 1100 (12), then the halt light stays on.

Limit: Jump and jump-if-zero are not wired, so this is not a general-purpose computer with branches. The memory chip is 32K, but this build uses addresses 0 to 15. No custom silicon and no fabricated PCB.

PROJECTS THE SCHOOL CAN OPEN

Anima — language-model meter (public)

Reads internal activations of open language models and estimates valence, arousal, and uncertainty per token. A guard recommends abstaining when the reading looks unreliable.

On the project's own validity rubric, TinyLlama 1.1B scored 94/100 (the project's publication bar was 60). On GoEmotions, valence correlation was about 0.19.

Limit: This does not mean the model has feelings. 94/100 is a project rubric, not an official exam score. The 0.19 correlation is weak.

Corvex — multi-host alert correlator (public)

Combines weak alerts from many computers into one campaign timeline. Sensors exist for Windows and macOS. Live quarantine is locked off. A person stays in control.

Results that hold are on synthetic practice fleets, including a small sealed set (3 attack packs and 5 benign packs).

Limit: Not validated on a real company's network or on a large set of purely normal traffic. Not a commercial security product.

BumbleBee — closed-corpus question answering (private repository)

Answers from a fixed document pack, cites the passage, or refuses. It does not use a Hugging Face transformer as the product.

On the sealed pack, ordinary BM25 search still scores higher in-domain F1 (0.136) than the correlator (0.122), on about 2,070 items.

Limit: Not a ChatGPT-class model. A perfect score on a small skills checklist is not the same as the core answerer. No patent has been filed.

Orqis — technical cofounder, live product

Backend for a tool that detects a software agent stuck in a loop, explains it, and opens a patch for a person to review before anything merges.

Limit: It does not silently push to the main branch. No customer count is claimed here.

WORK AND SCHOOL-ADJACENT ACTIVITY

Indian Institute of Science — aerodynamics intern, May 2025 (10 days)

Lab exposure to vortex-ring formation. During the internship I built vortex-tracker, which measures ring diameter and speed from video with OpenCV.

Limit: Later propeller and vortex-ring simulations were my own follow-on work, not an IISc assignment.

Vegam Solutions — engineering intern

2025 Q3: water-based air-filtration prototype under shop constraints.

2026 Q1: one month full-time on natural-language to SQL, under NDA.

Limit: No client deliverable or internal metric from the NDA role is included.

Athera (athera.digital) — founder

Websites and automation for small businesses for 6+ months. Two client websites and an in-progress AI HR build.

Limit: Client names are private and are not listed.

Evex — event company, Bangalore

Hosted 20+ school graduation parties. About INR 5 lakh profit.

Limit: This is operations and delivery, not a software product.

VidhiSetu — Indian legal research tool, closed beta

Natural-language research over an Indian legal corpus, with a citation check that drops unsupported claims. Informal feedback from 2 law agencies and 3 lawyers. The application stays private.

Limit: Not a public legal product and not a substitute for a lawyer.

Papers

CSET (security experimentation) and SaTML (trustworthy machine learning) submissions are under review.

Limit: Not accepted and not published. Do not list them as publications.

SCHOOL LIFE

Football, service, and other school activities

School football team for 4 years. State-level CBSE tournament. Goa Globe 2024, team 2nd place. Also ESSB / GameON.

Websites for Project Thrive, Project Lighthouse, and Arogi Foundation. 50+ hours of community service.

Model UN; badminton; swimming; two SWEA school trips (three days each). Past competitive skating at ForceOne Academy. Motorcycle track training, trained and not certified.

Limit: 2nd place is the team result at Goa Globe 2024, not an individual national ranking.

WHAT THIS RECORD DOES NOT SAY

No SAT score is stated, because this packet is for the school’s approval step, not a score report. No school name or grade is filled in above; the school should write those. GodFather and GeoQuant are paper-trading research only and are not investment results. Drift is not a medical device. Neural Sync (EEG) is still in progress.
